

Company Name -

Winuall

About Company -

Winuall is an edu-tech company and aims to help tutors go digital and provide them with the tools they need to teach. They provide a SaaS platform to digitise institution with features like Live Classes, Managing Digital Payments, Online Quizzes.

Theme -

Education

Prize -

Winuall will provide internship opportunities to the winners on the interview and performance basis and also provide them with T-shirts and goodies.

Problem Statement -

1. In today's new normal, it's really impossible to go outside and explore opportunities to visit tutors and learn. There are millions of tutors who are unable to generate more revenue and are unable to utilise their full potential. On the other hand, students also are facing challenges due to not being able to learn from the tutor which would be a best fit for them. Building AI driven platforms (web/mobile) could be a great approach to connect students with relevant sets of tutors. (Please note that tutors are not limited to exam prep tutoring but stands still for vocational courses like music, dance, or coding as well)

Expected output - A functional Android / iOS app or Web app.

Bonus points - Good UX

Technologies involved – Artificial Intelligence.

2. Millions of students suffer from some of the serious health issues including mental health, anxiety, depression, competitiveness and are unable to communicate about it. The idea is to build tools, or ways that engage with students (in any form - questionnaire, chatbots, video engagement) that predicts and recommends the students/tutors/parents about the same and build data driven analytics that helps to understand the student's performance/health insights and recommending next steps in most efficient ways to reduce serious health issues

Notes

Participants may choose any of the two tasks to get considered for review and awards from WinUAll
